FixTRNC - Home Services Platform (TRNC)

Project Documentation

---

1. Project Purpose

This project is a platform that helps people living in the Turkish Republic of Northern Cyprus (TRNC) find home service providers easily. Users can request help for common household problems such as TV repair, washing machine repair, dishwasher repair, wall painting, internet issues, and plumbing.

2. Problem Statement

People often rely on friends and relatives to find a reliable technician or service provider. This is slow and unreliable. This project gathers all home services in one place, saving users time and effort.

3. Features

- Users can choose a service type (TV repair, plumbing, painting, etc.)
- Users can describe their problem and create a service request
- Available technicians and service providers are listed
- *(Add the other features of your project here)*

4. Technologies Used

- Programming languages: HTML and Python
- Version control: Git and GitHub

5. Installation and Setup

- Clone the project: `git clone https://github.com/moeismaiel/fixtrnc.git`
- Go to the project folder: `cd fixtrnc`
- Install required programs and libraries
- Run the application: *(add your run command)*

6. Usage

Open the application and follow these steps: select the type of service you need, describe your problem, submit the request, and view the list of available service providers. *(Add screenshots of your application here.)*

7. Project Structure

- `main file`: Main program of the application

- *(List other files and explain what each one does)*

8. Developers

- Baran - Student Number: _____
